Attention

- Please do not use a high-pressure water gun to flush the host and the cameras.
- Please do not use alcohol, stain removal solution and other corrosive solvents to wipe the host and lens to avoid damaging the appearance of the product and waterproofness.
- Please make sure to connect all the units before turning on the power.
- Do not fold the cable lines during installation.
- Please use a certified 32-256 GB MICRO TF memory card with a CLASS 10 U3 classification or above and format the memory card before first use.
- Long-term use of the memory card will cause fragmentation, so it is recommended formatting the memory card regularly.
- Press the rubber plugs after inserting to ensure the waterproofness of the product.
- Tyre Pressure Sensors can be paired only after be installed on tyres.

Before Starting

- Before using the device, you have to insert the memory card.
- Unscrew the two screws and remove the cover in the lower side of the screen.
- Insert the memory card into the proper slot.
- Close the cover by tightening the two screws

Wiring Diagram

Method 1: Motorbike Battery

Maximum device current drain is 600 mAh.

We suggest to connect the Red wired (+) to a positive under key, so when the motorbike is off the consumption will be zero.

Method 2: USB

Apple CarPlay

1. Pair your smartphone via Bluetooth

2. Select the corresponding OS

3. CarPlay: Allow the use of CarPlay from Your phone.

Android auto

1. Pair your smartphone via Bluetooth

2. Select the corresponding OS

3. Android: Should automatically pair

Note: To pair the unit, the WiFi of the Smartphone must be On. After the initial connection via Bluetooth the display will switch to WiFi.

Main Menu

- A. **Recording time indicator**
- B. **Resolution Indicator**
- C. **GPS indicator**
